COURSE STRUCTURE & SYLLABUS

Course Code	CMOS ANALOGIC DESIGN	L	T	P	C
24ALMTVL101T	Professional Core	3	0	0	3
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> This course focuses on theory, analysis and design of analog integrated circuits in both Bipolar and Metal-Oxide-Silicon (MOS) technologies. Basic design concepts, issues and tradeoffs involved in analog IC design are explored. Intuitive understanding and real-life applications are emphasized throughout the course. To learn about Design of CMOS Op Amps, Compensation of Op Amps, Design of Two- Stage Op Amps, Power Supply Rejection Ratio of Two-Stage Op Amps, Cascade Op Amps, Measurement Techniques of OP Amp. To know about Characterization of Comparator, Two-Stage, Open-Loop Comparators, Improving the Performance of Open-Loop Comparators, Discrete-Time Comparators etc. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Design MOSFET based analog integrated circuits. Analyze analog circuits at least to the first order. Appreciate the trade-offs involved in analog integrated circuit design. Understand and appreciate the importance of noise and distortion in analog circuits. Analyze complex engineering problems critically in the domain of analog IC design for conducting research. Solve engineering problems for feasible and optimal solutions in the core area 					
UNIT - I		LectureHrs:14			
Basic MOS Device Physics: General Considerations, MOS I/V Characteristics, Second Order effects, MOS Device models and MOS Capacitor. Short Channel Effects and Device Models. Single Stage Amplifiers – Basic Concepts, Common Source Stage, Source Follower, Common Gate Stage, Cascode Stage.					
UNIT - II		LectureHrs:12			
Differential Amplifiers: Single Ended and Differential Operation, Basic Differential Pair, Common Mode Response, Differential Pair with MOS loads, Gilbert Cell. Passive and Active Current Mirrors – Basic Current Mirrors, Cascode Current Mirrors, Active Current Mirrors. Current Steering Circuit					
UNIT - III		LectureHrs:12			
Frequency Response of Amplifiers: General Considerations, Common Source Stage, Source Followers, Common Gate Stage, Cascode Stage, Differential Pair. Noise – Types of Noise, Representation of Noise in circuits, Noise in single stage amplifiers, Noise in Differential Pairs.					
UNIT - IV		LectureHrs:12			
Feedback Amplifiers: General Considerations, Feedback Topologies, Effect of Loading. Operational Amplifiers – General Considerations, One Stage Op Amps, Two Stage Op Amps, Gain Boosting, Common – Mode Feedback, Input Range limitations, Slew Rate, Power Supply Rejection,Noise in Op Amps, Stability and Frequency Compensation					
UNIT - V		LectureHrs:10			
Comparators: Characterization of comparator, Two-Stage, Open-Loop comparators, Other Open-Loop Comparators, Improving the Performance of Open-Loop Comparators, Discrete-Time Comparators.

COURSE STRUCTURE & SYLLABUS

Course Code	CMOS DIGITAL IC DESIGN	L	T	P	C
24ALMTVL102T	Professional Core	3	0	0	3
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> To understand the fundamental properties of digital Integrated circuits using basic MOSFET equations and to develop skills for various logic circuits using CMOS related design styles. The course also involves analysis of performance metrics. To teach fundamentals of CMOS Digital integrated circuit design such as importance of Pseudo logic, Combinational MOS logic circuits and Sequential MOS logic circuits. To teach the fundamentals of Dynamic logic circuits and basic semiconductor memories which are the basics for the design of high performance digital integrated circuits. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Demonstrate advanced knowledge in Static and dynamic characteristics of CMOS, Estimate Delay and Power of Adders circuits. Classify different semiconductor memories. Analyze, design and implement combinational and sequential MOS logic circuits. Analyze complex engineering problems critically in the domain of digital IC design for conducting research. Solve engineering problems for feasible and optimal solutions in the core area of digital ICs 					
UNIT - I		LectureHrs:12			
MOS Design Pseudo NMOS Logic: Inverter, Inverter threshold voltage, Output high voltage, Output Low voltage, Gain at gate threshold voltage, Transient response, Risetime, Falltime, Pseudo NMOS logic gates, Transistor equivalency, CMOS Inverter logic.					
UNIT - II		LectureHrs:14			
Combinational MOS Logic Circuits: MOS logic circuits with NMOS loads, Primitive CMOS logic gates–NOR & NAND gate, Complex Logic circuits design–Realizing Boolean expressions using NMOS gates and CMOS gates, AOI and OIA gates, CMOS full adder, CMOS transmission gates, Designing with Transmission gates.					
UNIT - III		LectureHrs:12			
Sequential MOS Logic Circuits: Behavior of bistable elements, SR Latch, Clocked latch and flipflop circuits, CMOS D latch and edge triggered flip-flop					
UNIT - IV		LectureHrs:10			
Dynamic Logic Circuits: Basic principle, Voltage Bootstrapping, Synchronous dynamic pass transistor circuits, Dynamic CMOS transmission gate logic, High performance Dynamic CMOS circuits.					
UNIT - V		LectureHrs:12			
Semiconductor Memories: Types, RAM array organization, DRAM – Types, Operation, Leakage currents in DRAM cell and refresh operation, SRAM operation Leakage currents in SRAM cells, Flash Memory–NOR flash and NAND flash.					
Textbooks:

COURSE STRUCTURE & SYLLABUS

Course Code	MICROCHIP FABRICATION TECHNIQUES	L	T	P	C
24ALMTVL103Ta	Professional Elective– I	3	0	0	3
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> • Comprehend impact of semiconductor industry on the design of development of integrated circuits. • Acquaint with clean room technology • Understand oxidation methods, aspects of photolithography, diffusion, ion implantation techniques. • Specify NMOS and CMOS design rules corresponding to 180nm, 90nm and 45nm technologies • Understand packaging principles 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • Understand various stages of fabrication • Understand Various packaging techniques and Design rules. • Classify various thin films and its characteristics. 					
UNIT - I		LectureHrs:14			
Introduction to Processing: Overview of semiconductor industry, Stages of Manufacturing, Process and product trends, Crystal growth, Basic wafer fabrication operations, process yields, Semiconductor material preparation, Yield measurement, Contamination sources, Clean room construction.					
UNIT - II		LectureHrs:12			
Photolithography: Oxidation and Photolithography, Ten step patterning process, Photoresists, physical properties of photoresists, Storage and control of photoresists, photo masking process, Hard bake, develop inspect, Dry etching Wet etching, resist stripping.					
UNIT - III		LectureHrs:12			
Diffusion& Ion Implantation: Doping and depositions: Diffusion process steps, deposition, Drive-in oxidation, Ion implantation-1, Ion implantation-2.					
UNIT - IV		LectureHrs:10			
Film Depositions and Growth: Metallization, CVD basics, CVD process steps, Low pressure CVD systems, Plasma enhanced CVD systems, Vapour phase epitaxy, molecular beam epitaxy.					
UNIT - V		LectureHrs:12			
Yield: Design rules and Scaling, BICMOS ICs: Choice of transistor types, PNP transistors, Resistors, capacitors.					
Packaging: Chip characteristics, package functions, package operations.					
Textbooks:

COURSE STRUCTURE & SYLLABUS

Course Code	NANO MATERIALS AND NANO TECHNOLOGY	L	T	P	C
24ALMTVL103Tb	Professional Elective – I	3	0	0	3
	Semester	I			
Course Objectives:					
<ul style="list-style-type: none"> To understand the basic idea behind the design and fabrication of nanoscale systems. To understand and formulate new engineering solutions for current problems and technologies for future applications. To acquire knowledge on the operation of fabrication and characterization devices to achieve precisely designed systems. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Understand the basic science behind the design and fabrication of nanoscale systems. Understand and formulate new engineering solutions for current problems and competing technologies for future applications. Make interdisciplinary projects applicable to wide areas by clearing and fixing the boundaries in system development. Gather detailed knowledge of the operation of fabrication and characterization devices to achieve precisely designed systems. 					
UNIT - I		Lecture Hrs:15			
Introduction of nano materials and nanotechnologies, Features of nanostructures, Applications of nano materials and technologies. Nano dimensional Materials 0D, 1D, 2D structures – Size Effects – Fraction of Surface Atoms – Specific Surface Energy and Surface Stress – Effect on the Lattice Parameter – Phonon Density of States – the General Methods available for the Synthesis of Nanostructures – precipitate – reactive – hydrothermal/solvothermal methods – suitability of such Methods for scaling – potential uses.					
UNIT - II		Lecture Hrs:12			
Fundamentals of nanomaterials, Classification, Zero-dimensional nanomaterials, One-dimensional nanomaterials, Two-dimensional nano materials, three dimensional nanomaterials. Low Dimensional Nano materials and its Applications, Synthesis, Properties and applications of Low Dimensional Carbon-Related Nanomaterials.					
UNIT - III		Lecture Hrs:12			
Micro-and Nanolithography Techniques, Emerging Applications, Introduction to Micro electro mechanical Systems (MEMS), Advantages and Challenges of MEMS, Fabrication Technologies, Surface Micromachining, Bulk Micro machining, Molding. Introduction to Nano Phonics.					
UNIT - IV		Lecture Hrs:11			
Introduction, Synthesis of CNTs - Arc-discharge, Laser-ablation, Catalytic growth, Growth mechanisms of CNT's - Multi-walled nanotubes, Single-walled nano tubes Optical properties of CNT's, Electrical transport in perfect nano tubes, Applications as case studies. Synthesis and Applications of CNTs.					
UNIT - V		Lecture Hrs:10			
Ferro electric materials, coating, molecular electronics and Nano electronics, biological and environmental, membrane-based application, polymer based application.					
Textbooks:

UNIT - I		LectureHrs:12			
Introduction: VLSI Design Cycle, New Trends in VLSI Design Cycle, Physical Design Cycle, New Trends in Physical Design Cycle, Design Styles, System Packaging Styles.					
UNIT - II		LectureHrs:10			
Partitioning: Partitioning, Pin Assignment and Placement: Partitioning–Problem formulation, Classification of Partitioning algorithms, Kernighan-Lin Algorithm, Simulated Annealing.					
UNIT - III		LectureHrs:12			
Floor Planning: Floor Planning – Problem formulation, Classification of floor planning algorithms, constraint based floor planning, Rectangular Dualization, Pin Assignment–Problem formulation, Classification of pin assignment algorithms, General and channel Pin assignments.					
UNIT - IV		LectureHrs:13			
Placement and Routing: Placement–Problem formulation, Classification of placement algorithms, Partitioning based placement algorithms.					
Global Routing and Detailed Routing: Global Routing – Problem formulation, Classification of global routing algorithms, Maze routing algorithms, Detailed Routing – Problem formulation, Classification of routing algorithms, Single layer routing algorithms.					
UNIT-V		LectureHrs:13			
Physical Design Automation of FPGAs and MCMs: FPGA Technologies, Physical Design cycle for FPGAs, Partitioning, Routing–Routing Algorithm for the Non-Segmented model, Routing Algorithms for the Segmented Model; Introduction to MCM Technologies, MCM Physical Design Cycle.

Course Code	RESEARCH METHODOLOGY AND IPR	L	T	P	C
24ALMTRM101	Mandatory Course	2	0	0	2
Semester		I			
Course Objectives:					
<ul style="list-style-type: none"> Identify an appropriate research problem in their interesting domain. Understand ethical issues understand the Preparation of a research project thesis report. Understand the Preparation of a research project thesis report Understand the law of patent and copyrights. Understand the Adequate knowledge on IPR 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Analyze research related information Follow research ethics Understand that today’s world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity. Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits. 					
UNIT - I		LectureHrs:12			
Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, scope, and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations					
UNIT - II		LectureHrs:12			
Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.					
UNIT - III		LectureHrs:11			
Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.					
UNIT - IV		LectureHrs:10			
Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.					
UNIT - V		LectureHrs:10			
New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

<ul style="list-style-type: none"> • Demonstrate in-depth knowledge in BiCMOS Technology. • Analyze complex engineering problems critically for conducting research in BiCMOS Technology. • Solve engineering problems with wide range of solutions in Radio Frequency Integrated circuits. • Realize different digital circuits using BiCMOS Technology 					
UNIT -I		LectureHrs:11			
BiCMOS Process Technology: CMOS Process Technology, Bipolar Process Technology, Isolation in CMOS and Bipolar Technologies, BiCMOS Technology, BiCMOS Design Rules.					
UNIT - II		LectureHrs:12			
Device Design Considerations: Design Considerations for MOSFET's, Design Considerations for Bipolar Transistors, BiCMOS Device Design Considerations.					
BiCMOS Device Scaling: MOS Device Scaling, Bipolar Device Scaling.					
UNIT - III		LectureHrs:13			
Device Modeling: Modeling of the MOS Transistor: MOSFET Structure and Operation, SPICE Models of the MOS Transistor, Analytical Model for Short-Channel MOS Devices. Modeling of the Bipolar Transistor: BJT Structure and Operation, Ebers-Moll Model, Bipolar Models in SPICE.					
UNIT - IV		LectureHrs:14			
BiCMOS Digital Integrated Circuits: BiMOS Totem-Pole Inveter: DC Characteristics, Transient Analysis, Delay Dependence on the Device Parameters, BiCMOS Circuit Design, Comparing CMOS and BiCMOS Inverters Speed, BiCMOS Gates.					
UNIT - V		LectureHrs:10			
BiCMOS Digital Circuit Applications: Adders, Multiplier, Random Access Memory, Programmable Logic Arrays, BiCMOS Logic Cells, BiCMOS Gate Arrays.

Semester		III			
Course Objectives:					
<ul style="list-style-type: none"> To understand the basics related to SoC architecture and different approaches related to SoC Design. To select an appropriate robust processor for SoC Design To select an appropriate memory for SoC Design. To realize real time case studies 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Understand the basics related to SoC architecture and different approaches related to SoC Design. Select an appropriated robust processor for SoC Design Select an appropriate memory for SoC Design. Realize real time case studies 					
UNIT - I		LectureHrs:11			
Introduction to the System Approach: System Architecture, Components of the system, Hardware & Software, Processor Architectures, Memory & Addressing. System level interconnection, An approach for SOC Design, System Architecture and Complexity.					
UNIT - II		LectureHrs:12			
Processors: Introduction, Processor Selection for SOC, Basic concepts in Processor Architecture, Basic concepts in Processor Microarchitecture, Basic elements in Instruction handling. Buffers: minimizing Pipeline Delays, Branches, More Robust Processors, Vector Processors and Vector Instruction extensions, VLIW Processors, Superscalar Processors					
UNIT - III		LectureHrs:14			
Memory Design for SOC: Overview: SOC external memory, SOC Internal Memory, Size, Scratchpads and Cache memory, Cache Organization, Cache data, Write Policies, Strategies for line replacement at miss time, Other Types of Cache, Split- I, and D – Caches, Multilevel Caches, SOC Memory System, Models of Simple Processor–memory interaction.					
UNIT - IV		LectureHrs:14			
Interconnect, Customization and Configurability: Interconnect Architectures, Bus: Basic Architectures, SOC Standard Buses, Analytic Bus Models, Using the Bus model, Effects of Bus transactions and contention time. SOC Customization: An overview, Customizing Instruction Processor, Reconfigurable Technologies, Mapping design onto Reconfigurable devices, Instance- Specific design, Customizable Soft Processor, Reconfiguration - overhead analysis and trade-off analysis on reconfigurable Parallelism.					
UNIT - V		LectureHrs:9			
Application Studies / Case Studies: SOC Design approach; AES-algorithms, Design and evaluation; Image compression–JPEG compression.

Semester		III			
Course Objectives:					
<ul style="list-style-type: none"> To know about Industrial safety programs and toxicology, Industrial laws, regulations and source models To understand about fire and explosion, preventive methods, relief and its sizing methods To analyse industrial hazards and its risk assessment. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> To list out important legislations related to health, Safety and Environment. To list out requirements mentioned in factories act for the prevention of accidents. To understand the health and welfare provisions given in factories act. 					
UNIT - I		LectureHrs:10			
Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, washrooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels etc, Safety color codes. Fire prevention and fire fighting, equipment and methods.					
UNIT - II		LectureHrs:10			
Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.					
UNIT - III		LectureHrs:10			
Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.					
UNIT - IV		LectureHrs:12			
Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.					
UNIT - V		LectureHrs:13			
Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii.Pumps,iii.Aircompressors,iv.Dieselgenerating(DG)sets,Programandscheduleof preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance					
Textbooks:					
1. Maintenance Engineering Handbook, Higgins & Morrow, Da Information Services. 1. Maintenance Engineering, H. P. Garg, S. Chand and Company.					
Reference Books:					
1. Pump-hydraulic Compressors, Audels, Mcgrew Hill Publication. 2. Foundation Engineering Handbook, Winterkorn, Hans, Chapman & Hall London..

COURSE STRUCTURE & SYLLABUS

Course Code	BUSINESS ANALYTICS	L	T	P	C
24ALMTOE301Tc	Open Elective	3	0	0	3
		Semester		III	
Course Objectives:					
<ul style="list-style-type: none"> The main objective of this course is to give the student a comprehensive understanding of business analytics methods. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> Students will demonstrate knowledge of data analytics. Students will demonstrate the ability of think critically in making decisions based on data and deep analytics. Students will demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making. Students will demonstrate the ability to translate data into clear, actionable insights. 					
UNIT - I		LectureHrs:10			
Business Analysis: Overview of Business Analysis, Overview of Requirements, Role of the Business Analyst. Stakeholders: the project team, management, and the front line, Handling Stakeholder Conflicts.					
UNIT - II		LectureHrs:10			
Life Cycles: Systems Development Life Cycles, Project Life Cycles, Product Life Cycles, Requirement Life Cycles.					
UNIT - III		LectureHrs:10			
Forming Requirements: Overview of Requirements, Attributes of Good Requirements, Types of Requirements, Requirement Sources, Gathering Requirements from Stakeholders, Common Requirements Documents. Transforming Requirements: Stakeholder Needs Analysis, Decomposition Analysis, Additive/Subtractive Analysis, Gap Analysis, Notations (UML & BPMN), Flowcharts, Swim Lane Flowcharts, Entity-Relationship Diagrams, State-Transition Diagrams, Data Flow Diagrams, Use Case Modeling, Business Process Modeling					
UNIT - IV		LectureHrs:10			
Finalizing Requirements: Presenting Requirements, Socializing Requirements and Gaining Acceptance, Prioritizing Requirements. Managing Requirements Assets: Change Control, Requirements Tools					
UNIT - V		LectureHrs:10			
Recent Trands in: Embedded and colleborative business intelligence, Visual data recovery, Data Storytelling and Data Journalism.					
Textbooks:					
1. Business Analysis by James Cadle et al. 1. Project Management: The Managerial Process by Erik Larson and, Clifford Gray					
Reference Books:					
1. Business analytics Principles, Concepts, and Applications by Marc J. Schniederjans, Dara G. Schniederjans, Christopher M. Starkey, Pearson FT Press. 2. Business Analytics by James Evans, persons Education.

COURSE STRUCTURE & SYLLABUS

Course Code	WASTE TOENERGY	L	T	P	C
24ALMTOE301Te	Open Elective	3	0	0	3
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"> • Introduce and explain energy from waste, classification and devices to convert waste to energy. • To impart knowledge on biomass pyrolysis, gasification, combustion and conversion process. • To educate on biogas properties, bio energy system, biomass resources and their classification and biomass energy programme in India. 					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"> • To know about overview of Energy to waste and classification of waste. • To acquire knowledge on bio mass pyrolysis, gasification, combustion and conversion process in detail. • To gain knowledge on properties of biogas, biomass resources and programmes to convert waste to energy in India. 					
UNIT - I		LectureHrs:10			
Introduction to Energy from Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors					
UNIT - II		LectureHrs:10			
Biomass Pyrolysis: Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.					
UNIT - III		LectureHrs:12			
Biomass Gasification: Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation					
UNIT - IV		LectureHrs:12			
Biomass Combustion: Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.					
UNIT - V		LectureHrs:10			
Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification- pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.					
Textbooks:					
<ol style="list-style-type: none"> 1. Non Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 2018 2. Biogas Technology - A Practical Hand Book - Khandelwal, K. C. and Mahdi, S. S., TMH, 2017 					
Reference Books:					
<ol style="list-style-type: none"> 1. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991. 1. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley
